PROFESSIONAL SUMMARY

Self-taught Data Analyst with hands-on experience transforming raw, large-scale datasets into business-ready dashboards and insights using SQL, Power BI, and Excel. Built end-to-end analytics projects across fraud detection and market analysis - handling 280,000+ records, engineering DAX measures, and uncovering patterns that directly inform business decisions. Actively sharpening Python and SQL skills with a focus on breaking into a data analyst role where BI and storytelling drive real impact.

CORE SKILLS & TOOLS

SQL: Joins • Aggregations • Subqueries • Window Functions Power BI: DAX • Data Modelling • Dashboard Development Python: Pandas • Matplotlib • NumPy	Excel: Pivot Tables • Power Query • VLOOKUP • INDEX-MATCH Analytics: Data Visualization • ETL • KPI Reporting • Statistical Analysis Tools: SSMS • Power BI Desktop • VS Code • Jupyter Notebook
---	---

PROJECTS

Credit Card Fraud Analysis Dashboard - [Power BI](#) • [DAX](#) • [SQL](#) • [Excel](#) | [Jan - 2026]

- ▶ Ingested and cleaned **284,000+ transactions** in SQL (SSMS), resolving null values, duplicates, and schema inconsistencies before loading into Power BI — reducing dirty data by ~100% prior to modelling.
- ▶ Engineered **12+ DAX measures** including dynamic fraud %, cumulative transaction trends, and amount-based risk tiers to power real-time slicer interactions across the dashboard.
- ▶ Uncovered that **68% of fraudulent transactions** occurred in the \$0–\$10 range, directly challenging the assumption that high-value transactions carry more risk — a finding that would reshape fraud alert thresholds.
- ▶ Detected **peak fraud windows** by hour-of-day, enabling a time-based risk scoring model that could reduce false negatives in fraud detection pipelines.
- ▶ Visualised severe class imbalance (99.83% legitimate vs 0.17% fraud) using custom DAX-driven KPI cards and drill-through pages — making the imbalance interpretable for a non-technical stakeholder audience.

Used Car Market Analysis Dashboard - [Power BI](#) • [DAX](#) • [SQL](#) • [Excel](#) | [March 2026]

- ▶ Consolidated **14,000+ listings** from multiple raw CSV sources using SQL joins and Excel Power Query — standardising inconsistent fuel type labels, price formats, and mileage units across datasets.
- ▶ Built a dynamic Power BI dashboard with **8+ KPI cards and 6 interactive visuals**, enabling users to filter by brand, fuel type, year, and price range with sub-second response time.
- ▶ Conducted **22-year time-series analysis (2000–2022)** revealing that used car listings peaked post-2015, with prices declining 18–22% for vehicles older than 8 years — actionable for dealer inventory strategy.
- ▶ Quantified that **~72% of demand** concentrates in the ₹2–5 lakh segment, with listings above ₹15L accounting for under 4% of market volume — insight directly usable for pricing and procurement decisions.

- ▶ Identified that **manual transmission vehicles dominate at ~83%** of listings while automatic variants command a 15–20% price premium, suggesting an emerging shift in buyer preference worth monitoring.
- ▶ Delivered a market positioning framework showing petrol vehicles hold higher resale value in the ₹3–7L band compared to diesel — a pricing insight relevant to dealership margin strategy.

CERTIFICATION

Deloitte Australia — Data Analytics Job Simulation ([Forage](#))

May 2026

- ▶ Completed a Deloitte job simulation involving data analysis and forensic technology.
- ▶ Created a data dashboard using Tableau to visualise key business metrics.
- ▶ Used Excel to classify data and draw business conclusions.

Alteryx Essentials – Alteryx | June 2026 ([Certificate](#))

- ▶ Developed proficiency in Alteryx workflow development for data preparation and transformation.
- ▶ Utilized tools including Select, Filter, Formula, Join, Union, Summarize, and Data Cleansing.
- ▶ Performed data validation, deduplication, and aggregation to support analytical reporting.
- ▶ Created repeatable workflows to streamline data processing and improve efficiency.

EDUCATION

Bachelor of Arts (B.A.) | Swami Vivekanand Subharti University, U.P.

Graduated March 2026

ADDITIONAL INFORMATION

-
- ▶ Completed multiple end-to-end data projects using real-world datasets across SQL, Excel, and Power BI.
 - ▶ Actively sharpening SQL skills through consistent problem-solving practice on HackerRank and LeetCode, focusing on query optimization and advanced analytics patterns.
 - ▶ Strong interest in Business Intelligence, data storytelling, and translating complex datasets into meaningful business decisions.
 - ▶ Languages: English (Fluent) • Hindi (Native)
